'A Great Big Week For Legs & Feet' - first Legs Matter Awareness Week kicks off in West Yorkshire June 3-7

Far left, Legs Matter chair Dr Leanne Atkin, from Pinderfields Hospital, Wakefield, and the University of Huddersfield, with coalition members.

Every two hours in England, someone loses their leg due to a [non-healing wound](#) - 'A Great Big Week For Legs & Feet', the first, national Legs Matter Awareness Week, June 3-7, is being held to urge people to 'stand up' to one of the UK's biggest health challenges.

Locally, across [NHS Wakefield CCG region](#) in 2016-17, an estimated 487 people were treated for diabetic foot ulcers costing the NHS an estimated £8.1 million and resulting in 162 amputations.

[Wakefield mum-of-two](#) Tracy Goodwin's leg ulcer was so painful and debilitating, that at one point she asked doctors to amputate her leg. Now as part of Legs Matter Week, the 39-year-old is urging others to seek medical help if they are worried.

She said: "I developed blood clots in my leg when I was pregnant, which led to me developing ulcers. At my lowest point, they affected every part of my life and the pain got so bad I even asked for my leg to be amputated. Instead they performed a deep vein transplant, which helped ease the pain. People should seek urgent medical advice if they think something is wrong with their leg or foot because I delayed going to see the doctor as I didn't realise I had an ulcer."

Legs Matter chair Dr Leanne Atkin, who provides clinical care for Tracy, is urging people to play their part by checking their own and others' legs and feet for 10 possible problems including swollen, tender legs or sores that won't heal and to [get involved](#) by holding their own 'Legs Matter Natter', to

take action with the 'Legs Matter Pledge' and by 'Sharing Your One Big Thing' - one important fact people wished they had known earlier about leg and foot health.

The vascular nurse consultant who works at Pinderfields Hospital, Wakefield and the University of Huddersfield, said: "There are more than a million people suffering with lower leg and feet disorders - many of which are life changing. These conditions are often overlooked by patients, carers and clinicians. We are passionate about changing this.

"We want people to check their own and others' legs and feet and to speak to a pharmacist, nurse, podiatrist or GP if they are concerned. Getting early treatment makes all the difference and prevents the condition becoming more serious."

Dr Atkin is kicking off the week on June 3 by having a 'Legs Matter Natter' with the executive board at Mid Yorkshire Hospitals NHS Trust, explaining how to improve leg and foot health and the importance of healthy legs for the workforce. She'll also be sharing the early signs of lower limb disease with clinical staff at the University of Huddersfield. On June 4, she'll be speaking at the Legs Matter Conference, at High Gosforth Park, Newcastle. The following day, she is meeting world-leading vascular experts, including Professor Alun Davies at a Venous Think Tank meeting in London to stress the importance of prioritising venous disease in the NHS. On June 6, there will be a Legs Matter Information stand from 10am to 2pm, in the main atrium at Pinderfields Hospital, Wakefield, for staff, patients and visitors and circulation checks will be available.

There are national events throughout the UK, including 'Legs Matter Natter' events on June 3, from 10am to 3pm, in the main atrium at Salford Royal Hospital, Pendleton, Salford, and on June 5, from 10am to 3pm, in the atrium at Manchester Royal Infirmary, Manchester.

And across Leeds, from June 3-7, a number of information events for health care professionals and other Leeds Community Healthcare NHS Trust staff are taking place.

Each year, it is estimated that more than a million people in the UK suffer from serious leg and foot conditions and the resulting delays to correctly diagnose and treat them can cause unnecessary suffering, disability, amputation and even death.

Now a group of the UK's leading lower limb clinicians, led by the Tissue Viability Society, have joined forces to encourage people to check their legs and feet, to get medical help fast and to highlight what level of care patients have a right to.

Costing the NHS up to [£5.3 billion annually](#), leg and foot ulcers, oedema (a failure of the lymphatic system), narrowing of the arteries and other serious problems need to be treated quickly and correctly to reduce the risk of non-healing wounds, secondary health problems and deteriorating health. An [NHS England study](#) estimates that having effective care early, reduces leg ulcer healing times from around two years to just a few months and is 10 times cheaper. But many patients suffer unnecessarily for several years due to a lack of knowledge and not accessing the right care.

Supported by NHS England, a group of eight health care charities and not-for-profit organisations have come together to tackle the issue. As part of this, they have produced an [online](#) checklist for people, including health care professionals, to recognise the signs and symptoms of lower leg and foot problems.

Leading clinicians from The Tissue Viability Society, The British Lymphology Society, Accelerate CIC, The College of Podiatry, The Society of Vascular Nurses, The Lindsay Leg Club Foundation, Foot in Diabetes UK and The Leg Ulcer Forum have formed Legs Matter and want to ensure that anyone with a lower leg or foot problem understands their condition and gets the urgent care and support that they need.

A patient will encounter a number of people along their journey to diagnosis and treatment – from the pharmacist, to the practice and community nurse, to the GP and beyond. The Legs Matter coalition want to make sure that every person, including the patient, has the information that they need to take the best steps towards healthy, pain-free legs and feet.

You can find top tips for leg and foot health in the Legs Matter leaflet and order [a free Action Pack](#). Let us know what you're up to and what you've pledged on [Twitter](#) or [Facebook](#) using the hashtag #legsmatter, or drop us an [email](#).

...ends...

Note to Editors:

Access reports and high resolution images of Tracy Goodwin, Dr Leanne Atkin and other patients [here](#) along with Tracy's [full story](#) . [Other patient stories are here](#).

A [Headline Report](#) by Dr Atkin reveals how living with long-term leg and foot conditions can lead to loneliness and feeling isolated. Other leg and feet facts:

- Annually in the UK, [730,000 people will have a leg ulcer, 169,000 will have diabetic foot ulcers](#) and a further [100,000 each year will suffer from lymphoedema](#) (failure of the lymphatic system)
- In addition, narrowing of the arteries (peripheral arterial disease or PAD) [affects one in five people over the age of 60 in the UK](#) who are at risk of lower limb loss and increased risk from death from heart attack and stroke
- Each year, complications among patients with diabetes and PAD result in 5,000 – 6,000 lower limb amputations
- The cost of caring for people with diabetic foot ulcers is estimated to be [£650 million](#), predominantly from nursing care and admissions – diverting resources from other patients and creating huge workforce pressures
- Just 47 per cent of leg ulcers [healed within one year](#)
- [Chronic oedema](#) affects more than [429,000 people](#) in the UK and is rising year-on-year due to an aging population and growing levels of obesity
- [Every hour in the UK](#) someone over 50 has part of their foot amputated
- Amputations are [70% higher](#) in the UK's Black population
- [There is a North/South divide](#) with major amputation rates 30% higher in Northern England compared with the South.
